

Project Work: Finalizing AudioCrypt Implementation and Integrating Encryption with Audio Steganography

23 July 2026

Task

Worked on the AudioCrypt project implementation. Integrated AES encryption with the audio steganography module and connected the main application components. Implemented the workflow for selecting an audio file, entering a message, encrypting the message and hiding the encrypted data inside the WAV file using LSB-based steganography. Checked the application flow and corrected implementation issues encountered during integration.
